Introduction

The standard PLC consists of a stand-alone Wago with the appropriate modules to incorporate all the necessary functionality for the BNWAS. The panels, buttons, VDR-messages etc. are all derived from within the wago. If there is power supply needed for attached equipment, it will be supplied directly from the Wago.

1. The PLC overview

The basic wago will consist of the following modules as seen in the overview (see Figure 1-1).

Figure 1-1: PLC overview

2. These modules' specifications can be found in (Annex 1

Wago 750 series specifications).

3. PLC explanation and settings

In the following exploded views (see Figure 3-1 and Figure 3-2) you can see which fields are attached to which PLC slide. These settings suffice the mandatory rules as stated in MSC128(75).

These fields are also described in the Product description v1.2 and can be subdivided in the following:

6* WAP 1st stage 4* WAP 2nd stage

4* WAP 3rd stage

6* Timer reset button

1* Stage 1 alarm out to VDR

1* Stage 2 alarm out to VDR

1* Stage 3 alarm out to VDR

1* Common failure alarm out

1* in BNWAS on/off

1* in BNWAS auto

: The number of connections can sometimes be reached individually, sometimes by daisy chaining the connections.

4. Annex 1

4.1 Wago 750 series specifications

4.1.1 System Description

The WAGO-I/O-SYSTEM 750 is a modular, fieldbus independent I/O system. It is comprised of a fieldbus coupler/controller (1) and connected fieldbus modules (2) for any type of signal. Together, these make up the fieldbus node. The end module (3) completes the node.

Couplers/controllers for fieldbus systems such as PROFIBUS, INTERBUS, ETHERNET TCP/IP, CAN (CANopen, DeviceNet, CAL), MODBUS, LON and others are available.

The coupler/controller contains the fieldbus interface, electronics and a power supply terminal. The fieldbus interface forms the physical interface to the relevant fieldbus. The electronics process the data of the bus modules and make it available for the fieldbus communication. The 24 V system supply and the 24 V field supply are fed in via the integrated power supply terminal.

The fieldbus coupler communicates via the relevant fieldbus. The programmable fieldbus controller (PFC) enables the implementation of additional PLC functions. Programming is done with the WAGO-I/O-PRO 32 in accordance with IEC 61131-3.

Bus modules for diverse digital and analog I/O functions as well as special functions can be connected to the coupler/controller. The communication between the coupler/controller and the bus modules is carried out via an internal bus.

The WAGO-I/O-SYSTEM 750 has a clear port level with LEDs for status indication, insertable mini WSB markers and pullout group marker carriers. The 3-wire technology supplemented by a ground wire connection allows for direct sensor/actuator wiring.
